Maximum Pressures of Available Sizes	0.5 psi	✓	✓	✓	✓								
	7 psi			✓	✓								
	60 psi	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	

Today Pacific Seismic Products is the world's leading supplier of earthquake-activated automatic gas shut-off valves and other seismic devices.

Pacific Seismic was incorporated in 1989 when it acquired the rights to Koso's seismic valves. PSP has continued to develop its gas shut-off valves by adding vertical and specialized types to its already successful horizontal line, giving PSP the most complete line of seismically activated gas shut-off valves from 3/4" to 6".

Having a complete hi-tech on-site manufacturing facility in Lancaster, CA, PSP is able to engineer, die cast, sand cast, CNC, machine and assemble their own parts and valves.

Pacific Seismic Product's state-of-the-art quality control process leads the industry with high-tech, multi-stage testing of every valve manufactured, assuring you absolute reliability in a "Made In America" product.
